

# Tier 1 Problem Solving Worksheet

School: \_\_\_\_\_

Meeting Date: \_\_\_\_\_

Team Members: \_\_\_\_\_

**Student Group/Area of Concern:** *Which group of students (e.g., grade level, students taking Alg. I) and what is the focus (e.g., ELA, math, attendance, behavior)?* \_\_\_\_\_

## Step 1 – Problem Identification: What is the Problem?

**Expected Level of Performance:**

Students will What is the expectation for every student within the large group? (e.g., “attend school at least 90% of instructional time,” “achieve a score of Level 3 or above,” “receive no more than one discipline referral”), as measured by How will the expectation be measured? (e.g., “attendance reports,” “universal screening data,” “EWS data,” “ODR reports”).

**Current Level of Performance:** *The sum of percentages below must equal 100%.*

\_\_\_\_% of students met or exceeded expected level of performance

\_\_\_\_% of students did not meet or exceed expected level of performance

**Appropriate Tier of Problem Solving:**

- ☐ Less than approximately 80% of students are meeting or exceeding expected levels of performance, continue problem solving to develop Tier 1 instructional/intervention plan.
- ☐ Approximately 80% or more of students are meeting or exceeding expected levels of performance, consider Tier 2 problem solving for students not meeting expectations.

**Notes:** *Use this space to capture any important details, or to explain any changes in the focus of problem solving (e.g., if the focus shifts to a particular subgroup during problem identification, explain the team’s decision making).*

**Goal (SMART):** By When will the stated goal be met (e.g., “the end of the school year,” or a specific date)? Be ambitious yet realistic., What percent of the student group do you expect will meet the goal by the established date? % of students will Clearly describe the expectation in measurable terms., as measured by How will progress/attainment of the goal be measured?.

Step 2 – Problem Analysis: Why is the problem occurring?

Hypothesis #1:

Domain: ☐ Instruction ☐ Curriculum ☐ Environment ☐ Learner *Especially at the Tier 1 level, teams should maintain their focus on hypotheses within the Instruction, Curriculum, and Environment domains.*

Hypothesis: *Be sure all hypotheses are alterable and based in research. They should address best educational practices that the team can impact.*

Prediction Statement: *Once a hypothesis is developed, create an if/then statement. This helps to ensure the hypothesis is actionable and will identify what should be implemented within the intervention plan.*

Assessment Method(s): ☐ Review ☐ Interview ☐ Observe ☐ Test

Specific Data to be Collected: *How will the team ensure the hypothesis is true? Determine what specific assessment method/data will be reviewed or collected in order to validate the hypothesis above. Note: it may be necessary to pause the meeting, then reconvene when the data is available.*

Validated: ☐ Yes ☐ No

*Is the hypothesis valid? Describe how the data did, or did not, support the hypothesis.*

Hypothesis #2:

Domain: ☐ Instruction ☐ Curriculum ☐ Environment ☐ Learner

Hypothesis:

Prediction Statement:

Assessment Method(s): ☐ Review ☐ Interview ☐ Observe ☐ Test

Specific Data to be Collected:

Validated: ☐ Yes ☐ No

Hypothesis #3:

Domain: ☐ Instruction ☐ Curriculum ☐ Environment ☐ Learner

Hypothesis:

Prediction Statement:

Assessment Method(s): ☐ Review ☐ Interview ☐ Observe ☐ Test

Specific Data to be Collected:

Validated: ☐ Yes ☐ No

Notes: *Use this space to capture any important details or notes to remember.*

## Step 3 – Intervention Design: What are we going to do about it?

Intervention plan developed for:		Content area/focus of improvement:	
<i>To focus the intervention plan, identify the group of students receiving the intervention as well as the content area or focus of improvement</i>			
Validated hypothesis: <i>Restate the validated hypotheses to ensure the intervention plan addresses the specific need.</i>			
<b>Intervention Plan</b>	<b>Support Plan</b> <i>Consider what <b>support</b> will be needed for the interventionist to implement the plan. This may include modeling or coaching for the intervention, or observation and feedback.</i>	<b>Fidelity Documentation</b> <i>How will the team know that the intervention plan is being implemented as designed? Identify who will collect what data, when, and how the data will be shared with others.</i>	<b>Progress Monitoring Plan</b> <i>How will the team know if student performance is improving? Identify who will collect what data, and when.</i>
<b>Who is responsible?</b> <i>Use names as much as possible when identifying <b>who is responsible</b> for the intervention, support, fidelity, and progress monitoring plans.</i>  <b>What will be done?</b> <i>Be as detailed as possible. What specifically will be implemented?</i> <b>When will it occur?</b> <i>Be as detailed as possible. What days? What time?</i> <b>Where will it occur?</b>	<b>Who is responsible?</b>  <b>What will be done?</b>  <b>When will it occur?</b>  <b>Where will it occur?</b>	<b>Who is responsible?</b>  <b>What will be done?</b> <i>Consider collecting data that will measure the different dimensions of fidelity (i.e., exposure, adherence, and quality).</i> <b>When will it occur?</b>  <b>How will data be shared?</b>	<b>Who is responsible?</b>  <b>What data will be collected and when?</b> <i>This should include the data identified in the SMART goal.</i> <b>When will team reconvene to evaluate progress?</b> <i>Identify the date and time the team will meet.</i> <b>How will we decide if the plan is effective?</b>  <b>Decision rules:</b> <i>Decide what the decision rules will be for Step 4. This is usually described as:</i> <i>Positive = <math>\geq</math> ___% Questionable = ___% - ___% Poor = <math>\leq</math> ___%</i> Positive Rtl = Questionable Rtl = Poor Rtl =
<b>Notes:</b> <i>Use this space to capture any important details or notes to remember.</i>			

## Step 4 – Response to Instruction/Intervention: Is it working?

Review Date: *Complete this step for each review meeting.*

Team Members:

**Progress Monitoring Data:** *The sum of percentages below must equal 100%.*

\_\_\_\_% of students met or exceeded expected level of performance

\_\_\_\_% of students did not meet or exceed expected level of performance

**Data-based decision making based on pre-determined decision rules:** *Refer to the previously established decision rules (in Step 3) to determine the students' response to intervention.**Once the student response has been determined, consider the prompts to determine next steps. Be sure the team's decisions are supported by data.*☐ POSITIVEGoal is *not* met: ☐ Continue plan as designed or ☐ Increase intensity of current plan (document all changes or adjustments)Goal is met: ☐ Fade intervention and monitor or ☐ Identify new goal, modify plan (document all changes or adjustments, complete new PSW if appropriate)☐ QUESTIONABLEFidelity concerns: ☐ Address fidelity, continue plan as designed and monitor (document adjustments to address fidelity)No fidelity concerns: ☐ Increase intensity of current plan and monitor if improvement doesn't occur, return to earlier steps of problem solving (document all changes or adjustments)☐ POORFidelity concerns: ☐ Address fidelity, continue plan as designed and monitor (document adjustments to address fidelity)No fidelity concerns: ☐ Return to earlier steps of problem solving to consider replacing the intervention (still addressing validated hypothesis), revisiting other viable hypotheses, or reassessing problem identification (document all changes or adjustments)**Changes or adjustments to the plan:** *Any and all changes to the intervention, support, fidelity, or progress monitoring plan should be clearly documented.***Notes:** *Use this space to capture any important details or notes to remember.*
