Additional Learning Support Case Study

Review the additional learning supports example provided to your group, and determine how something like this could be utilized and developed in your district/school. Please consider the following:

1. What would be the focus and format of the additional learning support time (who would it include, when would it happen, where would it occur, how are student needs determined, for how long, what is the goal- short and long-term, etc.)?

2. What data would be necessary to determine needs both initially and over time?
3. What beliefs and practices would need to be assessed and aligned?

4. Who would be key stakeholders to include?

5. What supports would be necessary for this to be successfully implemented (e.g. professional development, coaching, materials, reorganization of time, data, etc)?

6. How would you know if was successful (i.e. - what data would you need to monitor progress throughout)?
